SwissLens

simplicity without limits

contact lens simplicity without limits

SwissLens offers a comprehensive range of lenses with unlimited parameters, backed by professional services to facilitate contact lens fitting, patient follow-up and general administration.

simplicity without limits

SwissLens is committed to building long-term relationships with the lens specialists by introducing innovative and personalized products and services, which contributing to enhance lens wearer loyalty.

SwissLens sells its products to contact lens specialists only. We offer our standard and medical contact lenses to optometrists, ophthalmologist and hospitals. All lenses are made to measure and on order.

We do not hold stock.

SwissLens products and services constitute an alternative to frequent-replacement contact lenses and lenses sold directly to consumers through the internet.

No limits!

- Lenses can be manufactured with all geometries and in all available materials.
- Parameters are available in standard or fully variable increments.
- Lenses can be ordered in different renewal frequencies

Production

A unique manufacturing process

SwissLens has developed a unique manufacturing process based on nanometer lathe-cut machinery.

- No manual adjustment required, for better reproducibility.
- Computerized and integrated production system.
- Shorter production cycle for faster delivery times.
- Reduction of overall manufacturing costs.

No polishing? Only advantages!

By doing without the polishing phases, SwissLens manufacturing system offers a number of advantages.

- No polishing residues.
- Better reproducibility: the lens retains its geometry from the point of manufacturing.
- Improved optical quality. Especially with complex lenses.

R&D

New materials

- Testing of new materials, particularly those based on silicon hydrogel.
- Testing of new surface treatments (e.g. plasma) with the objective of improving wettability and comfort.

New lens geometries

- Faster and easier fittings for a better first-fit success rate.
- Ongoing research into new designs for enhanced lens comfort.

Products

Lens range

standard contact lenses

Standard soft and RGP contact lenses are available in spherical, toric and multifocal geometry.

Toric lenses, front or back, with spherical or aspherical periphery and with ballast or dynamic stabilisation.

Bifocal or multifocal lenses, options include centre near or center distance, with adjustable optical zones.

Simplicity and personalization

Our range of contact lenses has to fit all corneas and all ametropias, even in the most challenging cases. SwissLens is able to offer a personalised solution for each contact lens wearer, thanks to an extensive range of lenses, available in all materials and all geometries.

This vast choice of configuration is facilitated by a wide range of services that aims to simplify the daily work of the fitting specialist:

- Professional fitting advice.
- Contact lens assessment by SwissLens.
- Short delivery times.
- Solutions for special needs.
- Virtual fitting assistant
